

6.3 Material Delivery & Storage Log

What arrived, when, in what condition, where it went and when it was used — plus a running count of what is still on site.

PURPOSE: Keeping accurate records of material deliveries and on-site inventory is critical for cost control, project scheduling, and preventing theft or loss. This log helps you track what arrives, when it arrives, its condition, where it's stored, and when it's used.

Instructions

- Log every material delivery immediately upon arrival — don't wait until later
- Inspect all deliveries for damage or shortages before the driver leaves
- Note storage location so you (and your subs) can easily find materials later
- Cross-reference purchase orders and invoices to verify accuracy
- Update the "Used On" date when materials are installed or consumed
- Use the Current Inventory section to track what's on site at any given time
- Take photos of damaged deliveries immediately for insurance/return purposes

Delivery Inspection Checklist

- Count all items before driver leaves
- Check for damage to materials or packaging
- Verify items match purchase order and packing slip
- Note any shortages or wrong items immediately
- Get driver's signature on damage/shortage notes
- Contact supplier same day about any issues

MATERIAL DELIVERY LOG

Deliveries Received

DAMAGED OR SHORT DELIVERIES

Document any delivery issues in detail. This is critical for getting replacements or credits from suppliers.

Delivery Issue Report

Date: _____ Supplier: _____ PO #: _____

Issue: ☐ Damaged ☐ Short Quantity ☐ Wrong Item ☐ Other

Description

Driver Notified: ☐ Yes ☐ No

Driver Signature: _____

Supplier Contacted: ☐ Yes ☐ No

Material Storage Best Practices

- Keep lumber elevated and covered — moisture is the enemy
- Store drywall flat and dry — moisture ruins drywall quickly
- Protect windows and doors in original packaging until installation
- Keep electrical and plumbing materials secure — small items walk off easily
- Store paint and chemicals in temperature-controlled areas
- Label storage areas so subcontractors can find materials
- Lock up high-value items when site is unattended
- Take photos of material storage areas regularly
